DECATHLON DUPLICATE WEBSITE

User Feedback & Conclusion Report

Evaluation of a redesigned site intended to address shortcomings of the original Decathlon website

1. Purpose of the Evaluation

The duplicate Decathlon website was created as an improved alternative to the original website, aiming to address usability shortcomings and make product discovery and shopping easier. Five users explored the duplicate site from different perspectives: general browsing, gym and fitness equipment, price comparison, running gear, and overall homepage navigation. Their feedback was used to assess whether the redesigned experience feels clear, convenient and supportive of shopping tasks.

2. Positive Feedback on the Duplicate Site

- **Clear and familiar navigation:** Users could identify the search bar, account and cart areas, providing a recognizable starting point.
- **Visual sports categories:** Images and labels for running, cycling, swimming, hiking, fitness and football helped users find relevant products quickly.
- **Easy product scanning:** Product cards with images, names, prices and ratings supported quick browsing and comparison.
- **Visible promotions:** Seasonal deals and “Best Seller” or “New” labels made highlighted products and discounts easier to notice.
- **Relevant product discovery:** The Domyos brand section and featured items such as gym weights and Kiprun running shoes connected the homepage to users’ interests.
- **Helpful support links:** Returns, refunds, shipping and delivery information were seen as useful for online shoppers.

3. Remaining Opportunities for Improvement

- **Product information:** Make specifications, weights, sizing, fit, quality and intended use easy to locate.
- **Availability and delivery:** Clearly communicate stock status, available sizes and expected delivery information.
- **Price and discount clarity:** Show sale prices and original-price comparisons consistently so users can understand savings.
- **Functional reliability:** Ensure search, category links, product cards, Add buttons, cart actions and “View Deals” work as expected.

4. Conclusion

Overall, the five users responded positively to the duplicate Decathlon website. They found its layout organized and visually understandable, and appreciated the sports imagery, featured product cards, visible prices, ratings and promotional banners. These elements support the project’s goal of making browsing and product discovery more straightforward. However, a clear homepage is only the first step: users also need reliable product details, availability, delivery information and transparent pricing to make confident purchasing decisions. The duplicate site appears promising as a usability-focused alternative, but its effectiveness should be verified by testing key links and shopping actions and, where possible, comparing task completion with the original site.

5. Recommendations for the Next Iteration

Priority	Action
High	Verify navigation, product links, Add-to-cart, cart and promotional links.
High	Keep product specifications, sizing/stock and delivery details easy to access.
Medium	Improve clarity and consistency of sale prices and discount information.
Medium	Maintain image-led categories and easy-to-scan product cards.

Note: Findings summarize qualitative feedback from five users. They indicate perceived strengths and improvement areas, but do not by themselves prove that the duplicate site outperforms the original.
